

SILICONE COSMETIC PROSTHESIS FOR LOWER LIMBS

Forefoot | Total Foot | Tibial Cover

Thanks to our **technology**, it gives us the possibility to realize a prosthesis for foot amputations: digital, transmetatarsial amputation, Lisfranc and Chopart.

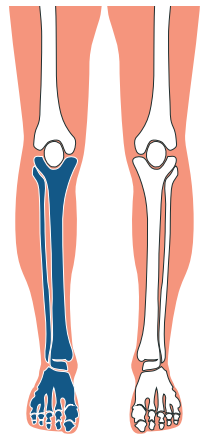

The aesthetic result is not to put in discussion and the filling with our **soft silicone** guarantees a comfortable fit.

This type of prosthesis requires a **good distal stump stability**.

For the finger amputations of the foot, the realization of the prosthesis is the same as the creation of a finger prosthesis for the hand.

Our prosthetic center proposes also **tibial standard cover and tibial custom cover** which are personalized in the color, with or without hair and toe attached or separated.
