

# SILCONTACT GLOVES

Silcontact gloves are **transparent gloves** in silicone and are registered as a CE medical device.

They are available in **different sizes** and have the function to act in a beneficial way on the skin of the burned patient, thanks to its action of compression.

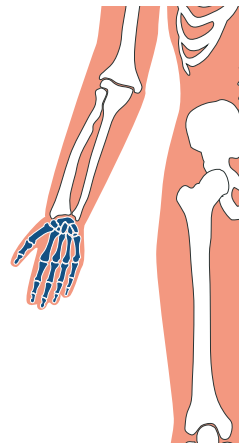

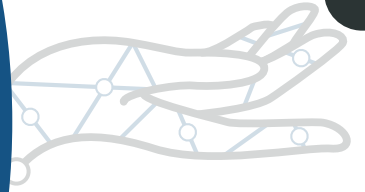

The transparency of the silicone, the material with which Silcontact is made, allows for **continuous visual control** of the skin.

The **elasticity** of the silicone allows to **increase the contact surface** between the glove itself and the skin.

This glove also serves as **mechanical protection** against external agents.

Silcontact is a medical device to be used only and exclusively to **perform a compression action** on the burned skin of the patient.
